A Combat Support Agency

DISA's Transformation to a Platform Service Provider

DISA Computing Services
August 2011

DISA
A Combat Support Agency

Platform Service Definition

Cloud Service Models

End-user application is delivered as a service instead of on-site software installations. Platform and infrastructure are abstracted.

Software as a Service (SaaS)

Application platform or middleware as a service on which custom applications and services can be deployed.

Platform as a Service (PaaS)

Physical infrastructure is abstracted to provide computing, storage, and networking as a service, avoiding the expense and need for dedicated systems

Infrastructure as a Service (IaaS)

Capacity Services

The Air Force Platform Service falls within the PaaS layer of the

From NIST: The capability provided by PaaS to the consumer is to deploy onto the cloud infrastructure consumer-created or acquired applications created using programming languages and tools supported by the provider. The consumer does not manage or control the underlying cloud infrastructure including network, servers, operating systems, or storage, but has control over the deployed

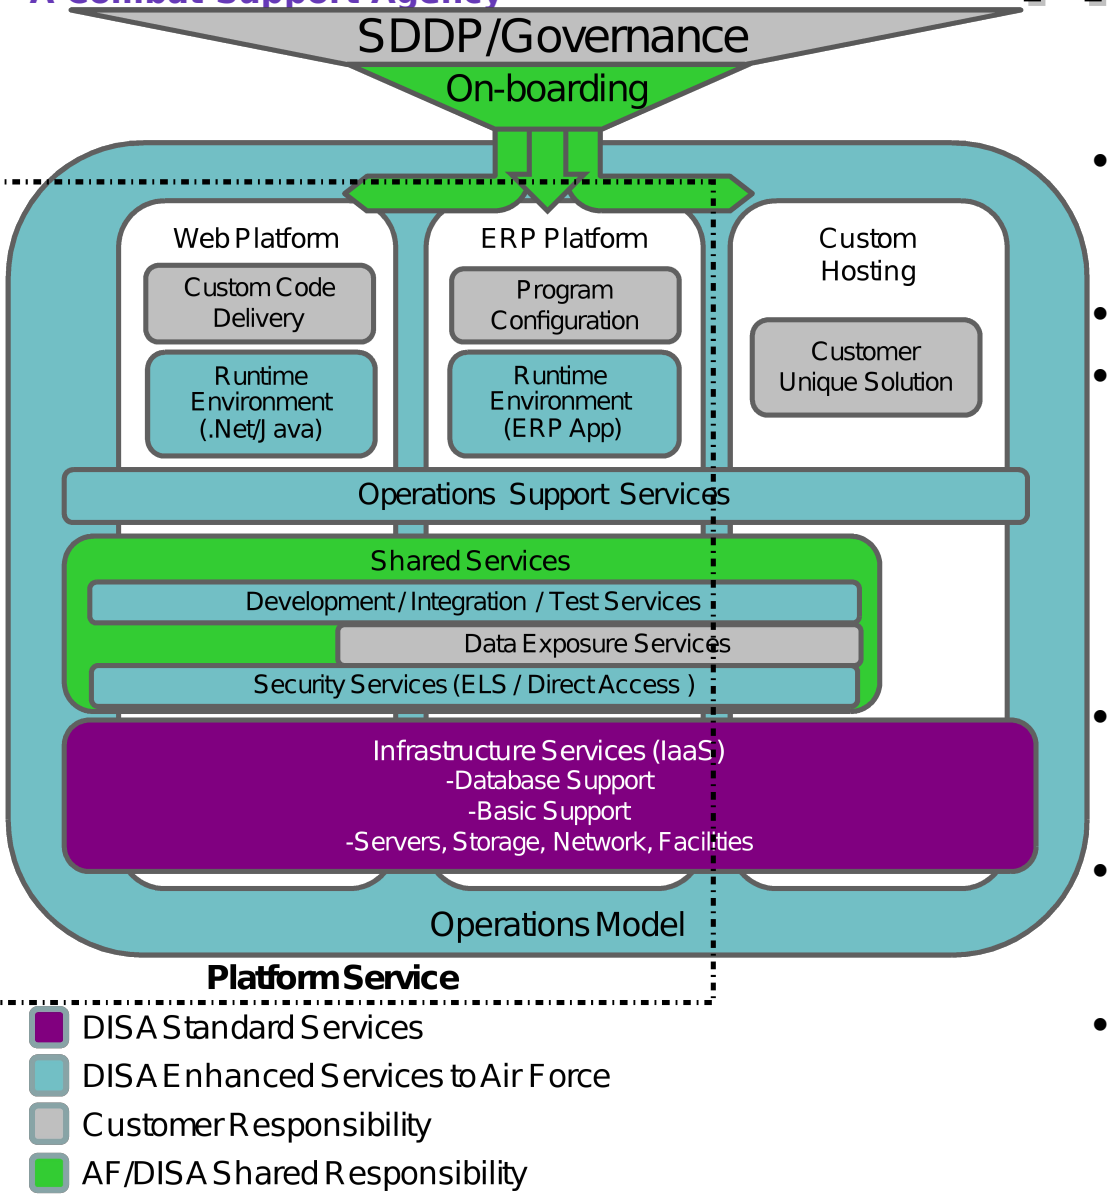
DISA
A Combat Support Agency

Platform Benefits

- **Provide standardized development environment with pre-integrated services allowing developer to focus on business logic**
  - **Remove IT infrastructure burden from developers**
    - **Reduce development costs (H/W, S/W, administration)**
    - **Allow developers to focus on application development**
  - **Help application PMO better manage costs and schedule**
    - **No lab infrastructure startup**
    - **No waste of resources due to over provisioning**
- **Provide a fast and inexpensive path to production**
- **Provide dynamic resource allocation**
- **Share situational awareness for platform services**
- **Provide utility-based billing**

Platform Hosting Model

A Combat Support Agency



- DISA provides Hardware, Basic and Database infrastructure & support
- ITIL based operations model
- Runtime Environment and Shared Services defined by DISA
  - Initial capability includes DISA infrastructure plus adoption of IIB authentication and MDE services
  - Follow-on capability adds jointly confirmed shared services
- Custom hosting for unique applications that leverage IaaS and shared services
- Customer builds and delivers Custom Code for DISA to execute in Runtime Environment
- DISA provides path-to-production lifecycle services

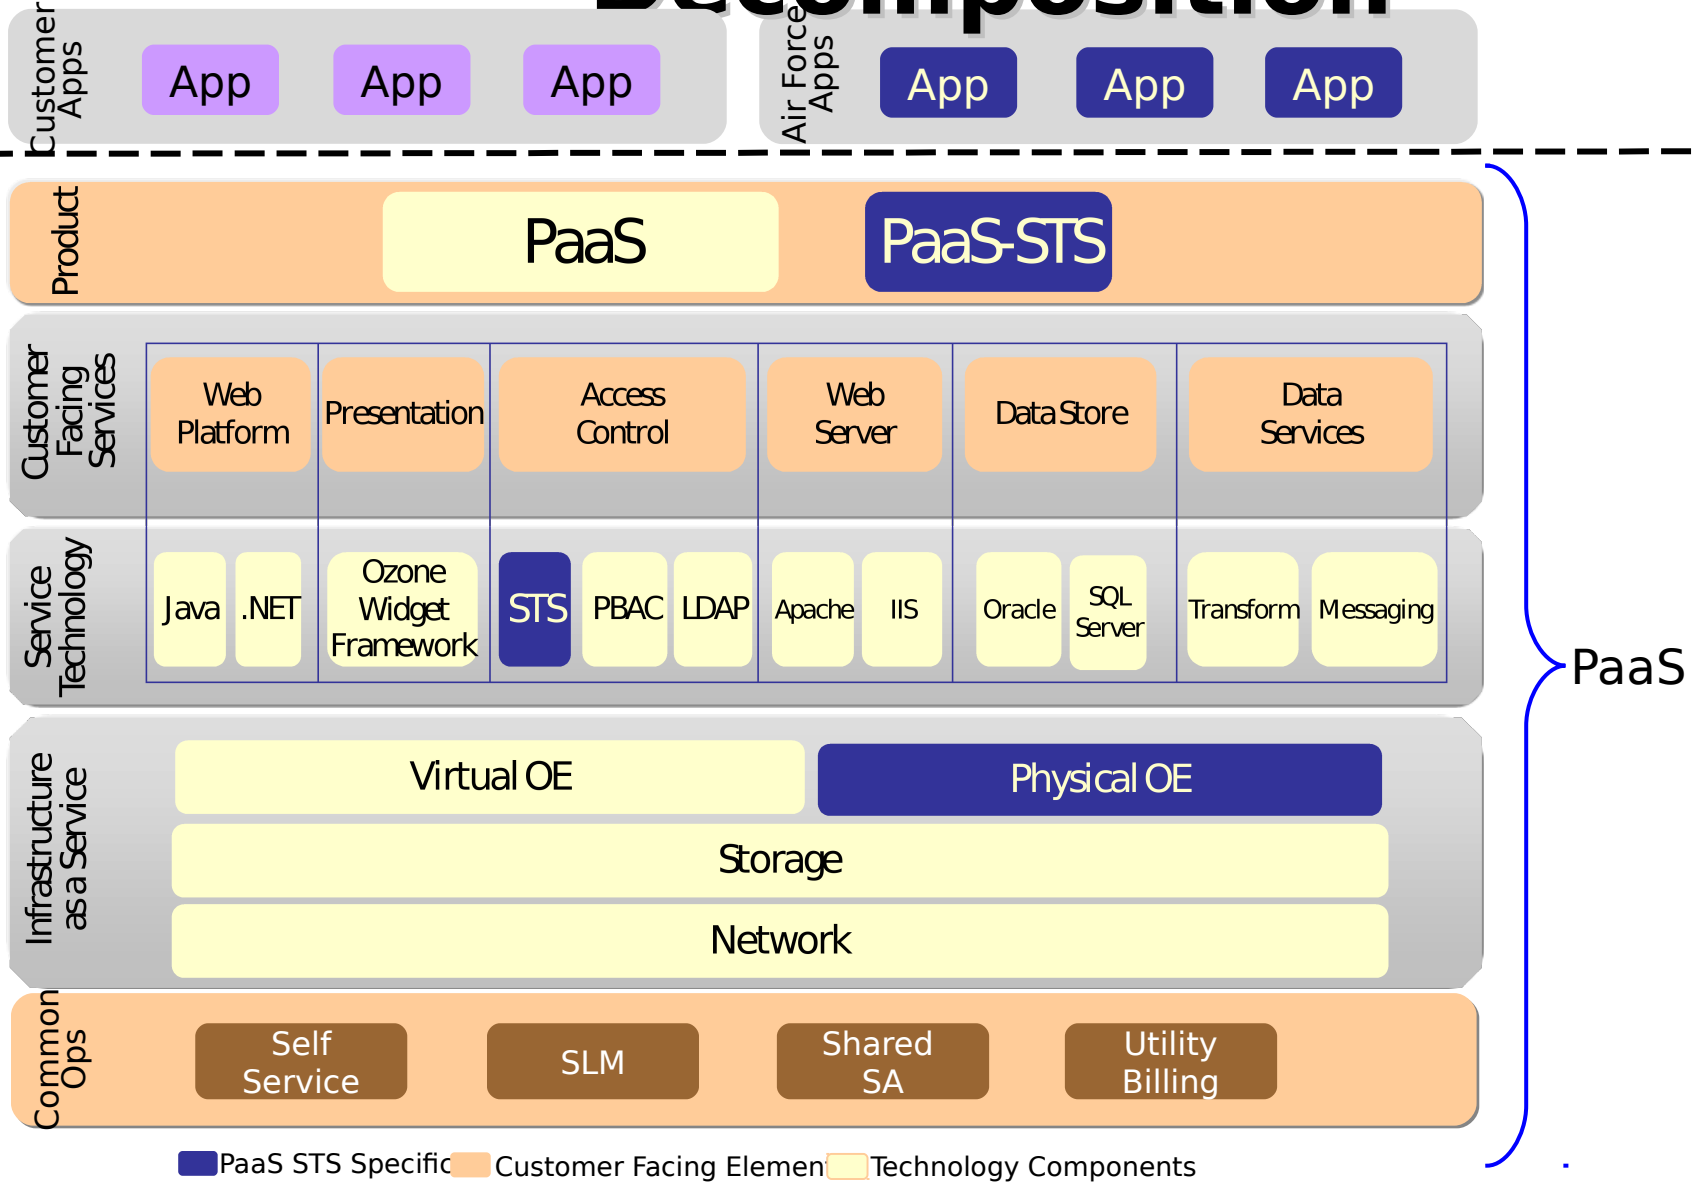
PaaS v1.0 Decomposition



DISA
A Combat Support Agency

Approach for an Enterprise Platform Service

- Two Platform as a Service (PaaS) Offerings
  - General purpose cloud platform model
  - Secure Token Service (STS) to support Air Force Enterprise Level Security (ELS)
- Elastic, Self-service, Utility Pricing, Rapid Deployment of Apps
- Web Apps / Services, ERP Apps
- JBoss Open Source for 95+% of all Java Applications

PaaS

- DoD adoptable cloud platform
- Standard dev / test / production
  - Java / .NET
- DoD access controls
- Virtual OE
- Leverage Enterprise Services
  - Registries, Security, Messaging…
- Elastic CPU / Memory resources
- Exposure Services

PaaS-STS

- Required for new AF applications
- Standard dev / test / production
  - Java / .NET
- Air Force ELS Access Controls
- Physical OE
- Dedicated Metadata Environment
- Elastic CPU / Memory resources
- Exposure Services

Open Source Software + COTS Platform Infrastructure

Development / Integration / Test Environments

Self-service Portal

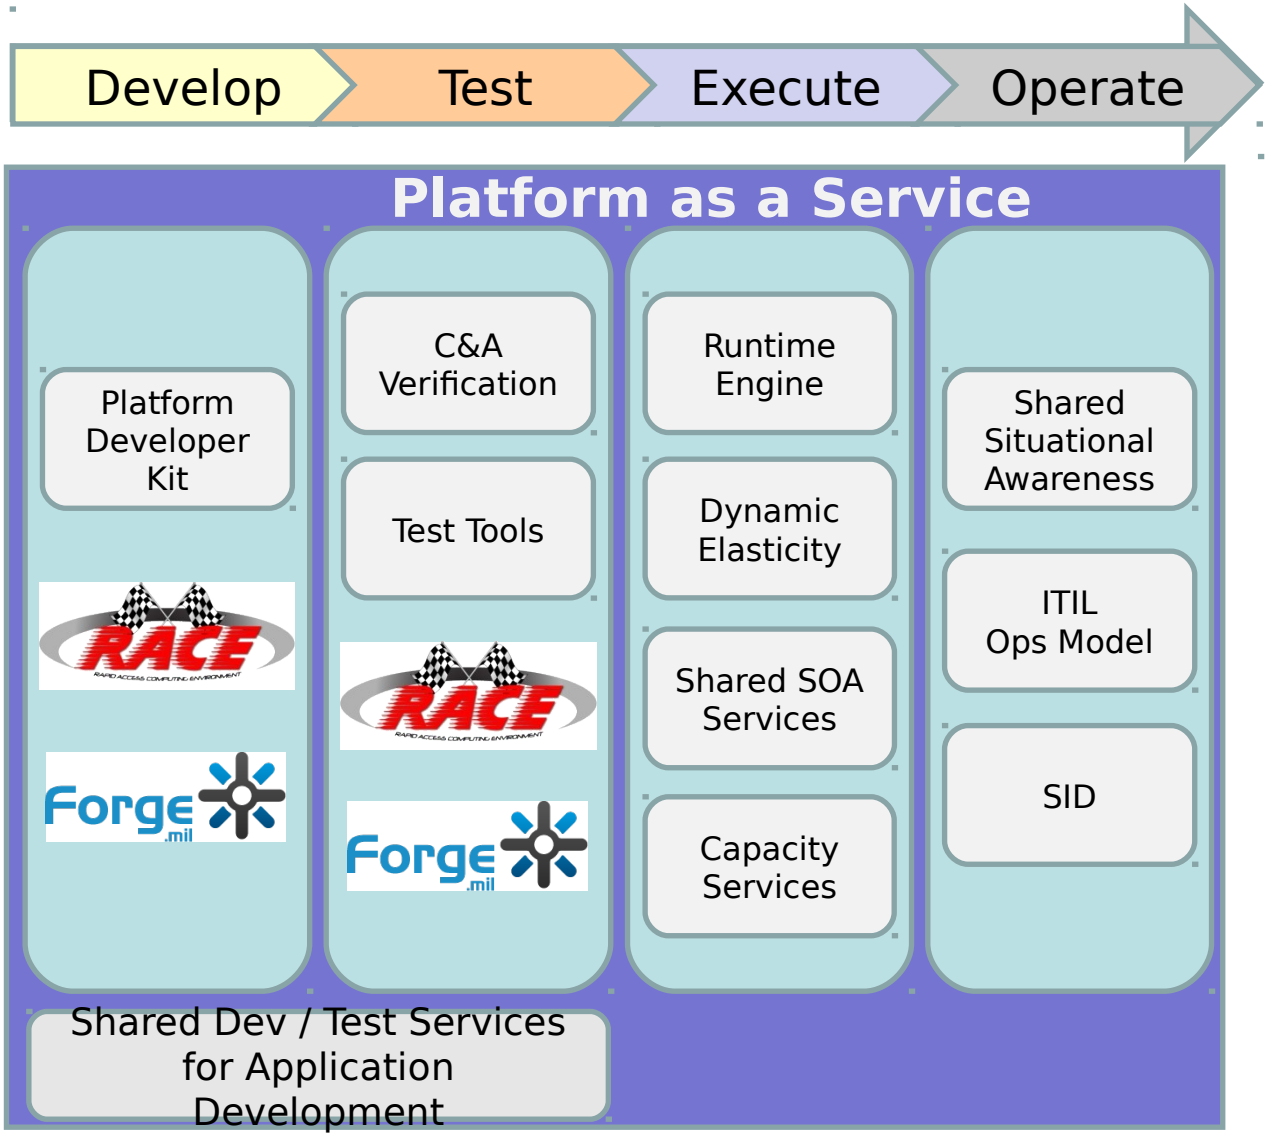
Rapid Path to Production

Operations / Shared Situational Awareness

PaaS Path To Production

DISA
A Combat Support Agency

- Standardized platform from development through production
- More controlled than commercial for safe, secure cloud services
- Easier to access than DoD production
- Smooth path to production with security validation
- Meets DoD standards for secure computing
- Enterprise Portal will provide access to all services
- Orchestration tools will support more mature cloud services
- Location independent



Rapid, standard, self-service capabilities

PaaS Feature Overview

A Co

PaaS Service Characteristic	DISA PaaS	Commercial
Latest hardware – server/storage	✓	✓
Technology refreshment	✓	✓
Enterprise class facilities	✓	✓
Standard development and production environments	✓	✓
Self-service ordering and rapid provisioning	✓	✓
Unrestricted/Restricted Service Type	✓	✓
Private Services and Data	✓	
Cleared support staff with 100% clearances (IT1/2) – no foreign nationals	✓	
Defense in Depth Security Posture (DoD Information Assurance standards)	✓	
Broadband access	✓	✓
Situational awareness	✓	✓
Program Stability (No need for contract re-compete)	✓	
Service Desk – 24x7	✓	✓
Service Level Management	✓	Few guarantees

Industry competitive capabilities with strong security and faster acquisition

PaaS Service Catalog

PaaS Catalog

- **PaaS**
- **PaaS STS**
- **High Availability Clustering**
- **Additional Storage**
- **Exposure Services**

Tier Level	Transaction Range/month	Rate
0	0-10000	$0.514
1	10001-25000	$0.280
2	25001-50000	$0.170
3	50001-100000	$0.130
4	100k-250K	$0.092
5	250K -500K	$0.055

Note: Example only

PaaS Bundle

- **Operating Environment**
- **2 Cores, 2 GB Memory**
- **Storage – 10GB**
- **Network infrastructure**
- **Web & JEE Containers**
- **PBAC Access Management**
- **Ozone Widget**

PaaS STS Bundle

- **Operating Environment**
- **2 Cores, 2 GB Memory**
- **Storage – 10GB**
- **Network infrastructure**
- **Web & JEE Containers**
- **STS Access Management**
- **AF Metadata**

Type accreditation for PaaS

Goal: Significantly reduce C&A timeline

- Concept grounded on principal of reciprocity between developed applications and DISA's platform execution environment
- Implies that accreditation authorities for the PaaS platform (DISA) and the developed web services and applications will reciprocate on acceptance of each others accreditation work
  - Customer will accept accreditation of DISA platform type accreditation
  - DISA will accept customer's certification of net-worthiness
- Approach
  - CSD will develop a DIACAP package for type accreditation of the PaaS execution environment
  - The customer's development, testing and fielding process will need to ensure rigor for application code (above the line system)
  - Acceptance of above the line and below the line IA work
